EDUCATION

FPT Polytechnic College Can Tho

Major: Software Development

- Developed backend systems and business logic using Java Spring Boot.
- Applied layered architecture (Controller – Service – Repository) in development.
- Experienced in working with databases and building RESTful APIs.

TECHNICAL SKILLS

Backend:

- Node.js (Express – basic), RESTful API
- Java Spring Boot, Spring Security, Spring Data JPA, Hibernate, Validation API.

Frontend:

- JavaScript (ES6+), HTML, CSS, Bootstrap, NuxtJS

Database:

- SQL Server, Database Design (ERD), Indexing, SQL Optimization.

Authentication:

- JWT (JSON Web Token)

Tools & Platforms:

- Git, Docker, Firebase

CAREER OBJECTIVE

My goal is to pursue a career as a Node.js Backend Developer, focusing on building RESTful APIs and handling complex business logic. With a solid foundation in Java Spring Boot and database management, I am eager to join a professional corporate environment to sharpen my practical skills, contribute to backend projects, and gain valuable industry experience

ADDITIONAL INFO

- English Proficiency: Achieved a TOEIC score of 630. Capable of reading and understanding technical API documentation in English.

WORK EXPERIENCE

Freelance Developer (Part-time) | 11/2025 – 03/2026

Position: Backend Developer

- Directly transformed ERD diagrams into physical databases, optimizing complex queries to ensure high data processing performance.
- Developed CRUD functionalities and business logic using Java based on the MVC pattern with Spring Boot.
- Managed source code and collaborated with team members using Git.

Position: Technical Consultant / Implementation Staff

- Proactively researched and analyzed customer needs to consult on software solutions tailored for enterprises.
- Translated client requirements into technical documentation and directly participated in designing database structures for 3+ core modules.
- Acted as a Technical Bridge between clients and the development team (Frontend & Backend) to ensure accurate implementation of requirements.

PROJECTS

DanhhoaBridal – Fashion & Accessories Management Web App

Role : Backend Developer

- Designed and implemented a multi-attribute product management system (size, color), utilizing Validation API to ensure data integrity from the client side before storing in Firebase.
- Managed and structured databases for efficient storage and retrieval of product information.
- Developed a user authentication system featuring Admin/User Role-Based Access Control (RBAC).
- Integrated image upload and management functionalities for product assets.
- Collaborated on frontend development with Nuxt.js, ensuring seamless API integration with the backend.
- Optimized page load performance by leveraging Server-Side Rendering (SSR) for product category pages.
- Technologies: Nuxt.js, JavaScript, HTML, CSS, Firebase.

TechCore – Recruitment & Internal HR Management Web App

Role: Backend Developer

- Built a recruitment management system covering job posting, candidate application receiving, and profile management.
- Developed CRUD functionalities and handled complex business logic for recruitment workflows.
- Designed and managed the database to store and retrieve candidate and recruitment data efficiently.
- Participated in developing internal management features following professional enterprise system models.
- Technologies: Java, Spring Boot, SQL Server, Thymeleaf.

TechCore – Internal Revenue & Expenditure Management Web App

Role: Frontend Developer

- Developed as a featured project for the WEB AI HACKATHON 2026 competition.
- Implemented a multi-layer security architecture using JWT and Middleware with fine-grained Role-Based Access Control (RBAC) to ensure only authorized accounting staff can approve financial vouchers.
- Engineered complex logic for budget calculation and cost allocation with high precision, maintaining data consistency during concurrent transactions.
- Developed comprehensive management modules for partners, contracts, receipts, expenditures, and budget distribution.
- Built an automated financial reporting system, ensuring financial integrity through strict transaction flow control.
- Deployment: Successfully deployed the system on a VPS for real-world accessibility.
- Technologies: Java Spring Boot, JavaScript, Nuxt.js, HTML, CSS.
